Computer Science Undergraduate / Full-Stack and Flutter Developer

SUMMARY

- Full-Stack and Flutter Developer experienced in building web and mobile applications with React.js, Node.js, Flutter, Firebase, and MongoDB. Led academic and hackathon teams to deliver real-time dashboards, secure payments, role-based systems, and ML-integrated applications.

TECHNICAL SKILLS

- Programming Languages:** Java, Python, C, C++, JavaScript, Dart
- Frontend & Mobile:** React.js, Flutter, HTML5, CSS3, Material UI, Responsive Design, Provider
- Backend & APIs:** Node.js, Express.js, REST APIs, JWT Authentication, Firebase Authentication, Cloud Functions
- Databases & Storage:** MongoDB, Firebase Firestore, MySQL, Hive
- Tools & Platforms:** Git, GitHub, GitHub Actions, Postman, VS Code, Android Studio, Firebase Hosting
- Additional:** Razorpay, Google Maps API, ML Model Integration, Agile Practices, Sprint Planning, Code Reviews

PROJECTS

- FixItNow: All Services at One Place** [\[Live Demo\]](#) Jul 2025 – Nov 2025
React.js, Node.js, Express.js, MongoDB, Firebase
 - Led a five-member team and designed the architecture for a service-booking platform supporting 20+ service listings.
 - Built REST APIs for listings, bookings, and users; implemented Firebase role-based access for customers, providers, and administrators.
 - Improved booking reliability with structured API responses, validation checks, and reusable frontend components for faster feature development.
- College Canteen Ordering App** Feb 2025 – Jul 2025
Flutter, Dart, Firestore, Razorpay, Hive, Provider
 - Architected real-time ordering and tracking workflows with Provider state management and Hive-based cart persistence.
 - Integrated Razorpay with confirmation, failure, and retry flows; built QR pickup and a real-time administrative dashboard.
 - Designed separate user and admin workflows for menu management, live order status updates, and payment tracking.
- Signature Verification System** [\[Live Demo\]](#) Aug 2024 – Jan 2025
MERN, Python, Deep Learning
 - Developed APIs for image upload, preprocessing, and inference, integrating a Python deep-learning model into the MERN backend.
 - Added secure access controls and modular backend services for sensitive signature data and future model enhancements.
- Disaster Management & Relief Coordination App** Hackathon Project
Flutter, Firebase, Google Maps API, Cloud Functions
 - Led development of one-tap SOS alerts, nearby safe-zone and shelter mapping, and role-based volunteer/admin dashboards.
 - Built real-time rescue coordination, resource allocation, community support, and multi-category donation workflows.
- Megathon 2025: Insurance Digitization Platform** Top 10 Finalist
React.js, Node.js, MongoDB, REST APIs, JWT
 - Led a team to build and pitch a working insurance prototype in 48 hours at E-Cell IIIT Hyderabad, powered by CHUBB and Qualcomm.
 - Collaborated with CHUBB mentors to align the frontend, APIs, data handling, and workflow design with business and compliance needs.

LEADERSHIP & ACHIEVEMENTS

- Project Team Lead:** Directed teams of up to five members through architecture decisions, sprint planning, task allocation, code reviews, blocker resolution, and on-time delivery.
- Megathon 2025 Finalist:** Secured a Top 10 finish by delivering and presenting an industry-focused insurance solution under a 48-hour deadline.

COURSEWORK

- Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Web Technologies

EDUCATION

Keshav Memorial Institute of Technology, Hyderabad
Computer Science and Engineering

Bachelor of Technology
